Specialists in the manufacturing of Springs

DOUBLE WINDING

SINGLE WINDING

From 4 - 10 mm

VARIOUS SPRINGS

Our Activity:

MANUFACTURER OF SPRINGS

Founded in 1966 by Mr. Albert DEPRez, the business specializes in the manufacturing of industrial springs for the agricultural industry machinery, as well as for construction and automobile manufacturers.

Historically, the company's main goal has been the manufacture of springs for hay-making (forks and tines) for large constructors like KUHN.

Over time our production has been extended to a wide range of springs and specific parts for industry, construction and automobile manufacturers.

Our Know-How:

OPTIMAL QUALITY

Specialists of steel wire working, with both hot and cold forming, DEPRez have a veritable know-how and expertise in the endurance and strength of each piece which is manufactured.

We have found a balance between wear-resistance and durability over time

Forming, thermal processing, quenching and tempering, shot peening our whole team continuously works hard to provide a high-quality product, and impeccable service.

A reference in the world of agriculture and industry

- Technical know-how for more than a half-a-century
- Reactive and rigorous management
- Qualified, multi-skilled and motivated staff
- Strict quality control at every stage of fabrication
- Response to all demands for special or traditional springs
- Well-maintained and modern equipment

Quenching - Tempering 18 mm

Quenching - Tempering 60x10 mm

Quenching - Tempering 14 mm

Steel wire spring 12 mm

Cold Processing:

- Hard Steel Wire
From 4 – 12 mm
- Soft Steel Wire
From 4 – 16 mm
- Galvanized Wire
- Refractory Steel Wire
- Stainless-Steel Wire
- Concrete Wire

Hot Processing :

- **ROUND**
From 12 – 25 mm
- **FLAT**
From 25 - 120 mm wide
From 4 - 12 mm thick
- **SQUARE**
From □ 14x14 mm
to □ 20x20 mm

Different Shapes :

- Rods
- Hooks
- Bars
- Rings

All shapes and forms from the simplest to the most complex.

- Automatic and semi-automatic winding-lines
- Two centres of bending and winding C.N.

Quality Control

To respond to the strictest guidelines in our spring manufacturing, we inspect the pieces at every stage of the design:

- Geometric Control
- Strength Control
- Solidity Control
- Endurance Control

Thanks to a careful selection of raw materials. Our products reliable, and of a quality above and beyond the highest of standards.

Design Research

In addition to our production capacity, our research and development office has built its own range of tools to meet the specific needs of our customers.

- Each piece has a full technical manufacturing file.
- 2D and 3D concept and design of each tool and parts (CAO/DAO)

Management

Above our know-how, we are absolutely committed to customer satisfaction. Customer-service is paramount, thus our strict management of logistics and technical control:

- Direct Communication with our clients and suppliers.
- Strict compliance with any deadline.
- Direct management of customer inventory.
